PROFESSIONAL SUMMARY

Software Engineer with 1+ years of experience building high-throughput backend systems, distributed data ingestion pipelines, and REST APIs. Skilled in optimizing system performance using Python (FastAPI, Django), multiprocessing, and database tuning, achieving up to 80% improvement in throughput and 70% reduction in write ops. Strong foundation in Data Structures & Algorithms, System Design, and Cloud/DevOps (Docker, PostgreSQL).

EXPERIENCE

Developer Associate Consultant (Software Engineer)

January 2025 – Present

SAP Labs India (via. NDBS)

Pune, India

- Engineered Python-based Capture and Loader services for high-volume enterprise network data ingestion, improving processing throughput by 80% through multiprocessing.
- Designed a min-heap-based load balancing mechanism to efficiently distribute workloads across processing pools, improving resource utilization and scalability.
- Optimized database interaction and data ingestion pipelines, reducing database write operations by 70% while improving overall system performance.
- Collaborated with cross-functional engineering teams to troubleshoot production issues, optimize backend services, and improve the reliability of enterprise data ingestion pipelines.

SDE Intern

June 2024 – August 2024

Script Lanes

Pune, India

- Developed a Node.js/Express analytics backend using Prisma ORM and PostgreSQL, processing 10,000+ healthcare Q&A records through an incremental ETL pipeline with dual-database architecture.
- Integrated Groq and OpenAI LLMs to standardize and categorize medical queries, powering REST APIs and analytics dashboards that improved customer issue resolution by 25%.

TECHNICAL SKILLS

Programming Languages: Python, C++, JavaScript, Java, SQL

Backend Development: FastAPI, Django, Flask, Node.js, REST APIs, Microservices, Prisma ORM, Postman

Databases: PostgreSQL, MySQL, SAP HANA, Firebolt DB, Database Optimization

AI & Machine Learning: Generative AI, LLMs, Multi Agentic AI system, AI Agents, MCP, Prompt Engineering, PyTorch, Scikit-learn, OpenCV, GitHub Copilot, Claude Code, Cursor, Codex, RAG, NLP

Cloud & DevOps: Docker, Git, GitHub, CI/CD, SAP BTP, Render, Vercel, GCP

Software Engineering: Data Structures & Algorithms, Distributed Systems, Concurrent and Parallel Processing, Performance Optimization, Object-Oriented Programming, System Design, SDLC, Agile Methodologies

PROJECTS

AgentFlow AI | Node.js, Firebolt, Gemini API, MCP, Gmail API

(Github)

- Architected a multi-agent AI orchestration platform using Node.js, Firebolt MCP, and Gemini API to automate enterprise workflows through sub-second analytics, REST APIs, and intelligent Gmail reporting.

VoxPilot | Python, LiveKit, Gemini, Deepgram, Murf AI, Docker

(Github)

- Built a real-time multimodal AI voice agent using LiveKit, Gemini, Deepgram, and Murf AI, delivering low-latency speech-to-speech interactions through containerized deployment with Docker.

Predico | Django, PostgreSQL, Machine Learning

(Github)

- Developed a full-stack disease prediction platform using Django, PostgreSQL, and machine learning with secure authentication, REST APIs, and predictive models achieving approximately 80% accuracy.

EDUCATION

SCTR's Pune Institute of Computer Technology (PICT)

Pune, India

Bachelor of Engineering in ENTC (CGPA: 8.79/10)

December 2021 – June 2025

ACHIEVEMENTS

- Published research paper on Deep Learning-based Image Steganography at ICCNet 2025 (Springer). ([View Paper](#))
- DSA & CP (C++): Knight on [Leetcode](#), 4-star on [Codechef](#), Specialist on [Codeforces](#)
- Certified in McKinsey.org Forward Program, [SAP Generative AI Developer](#), [SAP Backend Developer](#).
- Achieved 3rd Rank in SPPU University Exam in ENTC branch.
